## GameObject

Each ScriptableObject has a value and a defaultValue. The value can be modified via script, the defaultValue can not.

A Reset method is publicly available to reset the value to equal the defaultValue. This method is also accessible via the inspector.

Event handlers for update and reset events are available to each ScriptableObject with value and defaultValue properties.

```
private void OnEnable()
{
    gameObjectReference.UpdateEvent += OnScriptableObjectUpdate;
    gameObjectReference.ResetEvent += OnScriptableObjectReset;
}
When adding a handler to any event, make sure and remove it when the script it is associated with is disabled.
private void OnDisable()
{
    gameObjectReference.UpdateEvent -= OnScriptableObjectUpdate;
    gameObjectReference.ResetEvent -= OnScriptableObjectReset;
}
```
